👤 PROFILE

I am a recent bachelor of biology graduate from Winthrop University and a current computer science associate's degree candidate at Georgia Perimeter College. I plan on finishing up my associate's degree in 2022 and then pursuing my second bachelor in computer science. My rigorous educational endeavors reflect my genuine passion for learning and trying new things. With this being said, I would love an opportunity to speak more in-depth in regards to the position in question or my skills set.

💼 WORK EXPERIENCE

📅 08/2021 – 11/2021   📍 REMOTE
Software developer(.net)
Revature

· Created normalized databases to store user generated information for later retrieval
· Brainstormed within a group to create a viable database and webpage routing model

🏆 PROJECTS

📅 10/2021
TofuWarrior
https://github.com/08162021-dotnet-uta/P2_TheTofuWarriors.git

Tofu Warriors is a search engine and collaborative forum for gourmet recipes. Users are able to securely login and then search, create, edit, and clone recipes. Recipes are available to users from either the 3rd party API or from user-created recipes stored in our database. The comment section allows for users to express their opinions on recipes that they tried, suggest

♛ PROJECTS

improvements on recipes, and interact with other foodies by responding directly to their comments. Each recipe has an ingredient list, instructions on how to prepare the meal, and a list of tags to describe what kind of recipe it is. This application challenges users' culinary creativity and provides them with the information and community to be able to create amazing meals.

📅 01/2022
Peregrine Project
Imagine Software

The Peregrine Project is a billing software created to target small medical practices and innovate the billing process for the use of their billing professionals, as well as to automate integration of billing software seemlessly with other technologies and pre-existing data.
